🐨 Gumnuts — AI Memory for Everyone

> *the best ai tool, ever. like a fat koala in the Blue Mountains.*

Gumnuts is a browser extension for Microsoft Edge and Chrome that gives your AI a persistent memory across sessions. Never lose context again.

The Problem

Every time you start a new chat with Claude, ChatGPT, Gemini, or any other AI — it has no idea who you are, what you've been working on, or what you decided last session. You spend the first 10 minutes re-explaining everything. Every. Single. Time.

Gumnuts fixes that.

What It Does

① **Load My Memory** — one click pulls your saved context from your private GitHub repo and injects it directly into your current AI chat. Your AI picks up exactly where you left off.

② **Ask AI to Summarise** — at the end of a session, generate a structured summary prompt and send it to your AI. It mines the full conversation and gives you a clean summary.

③ **Save to Cloud** — paste the summary back into Gumnuts and hit Save. It appends to your private memory file on GitHub. Done in 30 seconds.

Features

- 🧠 **Load Memory** — pulls your context file from GitHub and injects it into any AI chat automatically
- ⚡ **Generate Prompt** — creates a structured end-of-session summary prompt optimised for each AI
- 📡 **Send to ALL AI Tabs** — broadcasts your prompt to every open AI tab simultaneously (Claude + ChatGPT + Gemini at once)
- 💾 **Save to Cloud** — appends session summaries to your private GitHub context file via the GitHub API
- 🌙 **Dark mode** — pastel pink light mode, deep dark mode, remembers your preference
- 🐨 **Floating sidebar** — draggable, resizable, minimises to a pill, always visible on AI pages

- ✅ **Works on** Claude, ChatGPT, Gemini, Grok, Copilot, Mistral, Perplexity

---

How to Install (Developer Mode)

Gumnuts is not yet on the Edge or Chrome Web Store. Install it manually:

1. Download the latest release zip from the Releases page
2. Extract the zip to a folder on your machine
3. Open Edge and go to `edge://extensions`
4. Turn on **Developer mode** (bottom left)
5. Click **Load unpacked**
6. Select the extracted `gumnuts` folder
7. Gumnuts will appear in your toolbar

For Chrome: same steps but go to `chrome://extensions`

Setup

1. Create a **private** GitHub repository — name it anything (e.g. `my-ai-memory`)
2. Generate a GitHub **Personal Access Token** with `repo` scope:
   - Go to GitHub → Settings → Developer settings → Personal access tokens → Tokens (classic)
   - Click Generate new token → select `repo` → generate → copy it
3. Click the Gumnuts icon in your toolbar → the Welcome page will open
4. Enter your GitHub username, repo name, and token → click **Save Settings**

That's it. Gumnuts will now load and save your memory file (`CLAUDE_CONTEXT.md`) to your private repo.

How to Use

Starting a new chat

1. Open Claude, ChatGPT, Gemini (or any supported AI)
2. The Gumnuts sidebar appears automatically on the right

3. Click 🧠 **Load My Memory**
4. Your context is injected into the chat — the AI knows who you are and what you're working on

End of session

1. Click ⚡ **Ask AI to Summarise**
2. Copy the generated prompt and paste it into your AI chat
3. The AI will produce a structured summary of everything you worked on
4. Paste that summary into the **Paste summary here** box
5. Click 💾 **Save to Cloud**
6. Done — your memory is updated for next time

Broadcast to all AIs

1. Generate your prompt
2. Click 📡 **Send to ALL AI Tabs**
3. The prompt is injected into every open AI tab simultaneously

---

The Memory File

Gumnuts stores your memory as a plain markdown file (`CLAUDE_CONTEXT.md`) in your private GitHub repo. Each session appends a new `## SESSION UPDATE` block with the date, AI used, and full summary.

You own your data. It lives in your private repo. Gumnuts never sees it — it goes directly from your browser to GitHub's API using your own token.

You can edit the file manually, read it any time, and paste it into any AI tool even without the extension.

Supported AI Platforms

Platform	Load Memory	Inject Prompt	Save Summary
Claude (claude.ai)	✅	✅	✅
ChatGPT (chatgpt.com)	✅	✅	✅

Platform	Load Memory	Inject Prompt	Save Summary
Google Gemini	✅	✅	✅
Grok (grok.com)	✅	✅	✅
Microsoft Copilot	✅	✅	✅
Mistral / Le Chat	✅	✅	✅
Perplexity	✅	✅	✅

Privacy & Security

- Your GitHub token is stored locally in your browser's extension storage — it never leaves your machine except to talk to GitHub's API directly
- Your memory file lives in **your** private GitHub repo — Gumnuts has no server, no database, no analytics
- No data is collected. No accounts. No subscriptions required.
- The extension only accesses the AI platforms listed above and `api.github.com`

Donationware

Gumnuts is free. It will always be free.

If it saves you time and frustration, consider buying the koala a coffee:

💛 **Support Gumnuts on PayPal**

Every donation keeps the koala fed and the project alive.

Roadmap

- [x] Floating sidebar on all AI pages
- [x] Load memory from GitHub → inject into chat
- [x] Save session summaries to GitHub
- [x] Broadcast prompt to all open AI tabs
- [x] Dark mode
- [x] Draggable + resizable sidebar

- [ ] Custom prompt library (Sprint 1)
- [ ] Hotkeys for all actions (Sprint 1)
- [ ] Daily Gumnuts adventure animations (in progress)
- [ ] Edge Add-ons Store listing
- [ ] Chrome Web Store listing
- [ ] Web app / SaaS version

License

MIT — do whatever you want with it. Just don't be a dick.
